Auckland Breast Cancer Register—12 Year Data
A special project of the Auckland Breast Cancer Study Group

Vernon Harvey, Reena Ramsaroop, Alex Ng, Erica Whinerey Kelly, Maria Pearse
Mark Barrios, Mina Christophers, Troydyn Raturaga

The Register was established against a background of important advances in all areas of breast cancer. Information about current practice plays a key role in supporting the multi-disciplinary teams necessary for modern, high quality, evidenced-based care. Between 1st June 2000 and 31st May 2012, a total of 16399 patients were diagnosed with breast cancer within the Auckland region. The data for In Situ patients, representing 1643 incidents of breast cancer, is presented below.

*European includes ‘Other Minority Ethnicities’ e.g. Middle Eastern, Latin American, African
**Other includes lump, pain, skin change, nipple change, incidental finding and 37 unknown

Breast Cancer — In Situ Disease Data

Demographics (by patient, n=1590)

Diagnosis (by incident, n=1643)

Treatment/Surgery (by incident, n=1643)

Treatment/Oncology (by incident, n=1643)

Prognostic Indicators (by incident, n=1643)

Survival Data (by patient, n=1590)

Data to date for demographics, diagnosis, treatment, prognostic indicators and survival are mostly consistent with national and international reports.

The Auckland Breast Cancer Study Group gratefully acknowledges: the funding of the Register by The New Zealand Breast Cancer Foundation the administrative support of Auckland District Health Board and the valuable contribution of Valerie Pennick to this poster.
